CSC and CrowdStrike:
Complete Domain Takedown Management

Accelerate threat response with end-to-end managed takedowns of malicious domains detected through CrowdStrike Falcon Adversary Intelligence

Challenges

Organizations face growing threats from malicious domains used in phishing, brand impersonation, and adversary infrastructure. CrowdStrike Falcon® Adversary Intelligence delivers industry-leading detection and visibility into these threats across the open, deep, and dark web, empowering security teams to rapidly identify, prioritize, and report abuse. However, managing domain takedowns can be inherently complex. The process often involves multiple registrars, platforms, and policies, making it difficult for organizations to track progress and measure outcomes.

Solution

CSC and CrowdStrike jointly deliver a comprehensive approach to domain threat mitigation. By combining CrowdStrike's industry-leading threat detection with CSC's expertise as a global enterprise domain registrar, organizations gain fully managed takedowns. CSC provides complete takedown management for malicious domains submitted through Recon in Falcon Adversary Intelligence, delivering clear status updates, timing, outcomes, and confirmation through dedicated portal access. With the click of a single button, customers can automatically initiate a takedown request with CSC.

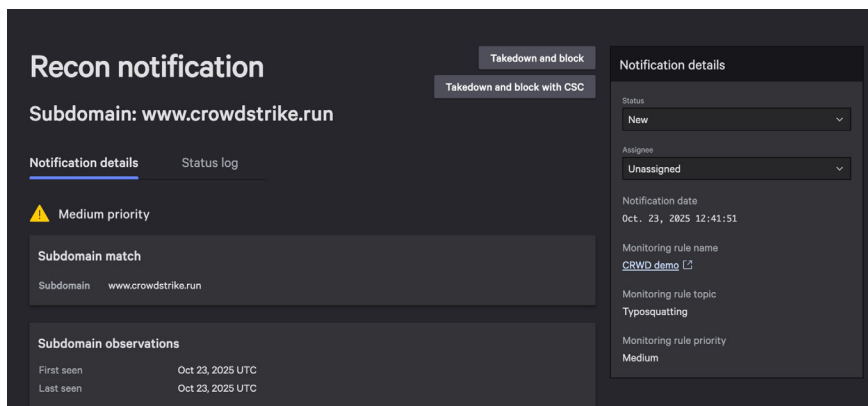

Figure 1. CrowdStrike Falcon with one-click CSC takedown button

Key benefits

- **Accelerated Threat Response:** Transform one-click submissions into fully managed takedown operations with clear timelines and outcomes.

- **Complete Visibility:** Track every takedown request in real time through the CSC Portal with detailed status updates and takedown confirmation.

- **Proven Expertise:** Leverage CSC's experience as an enterprise domain registrar and global leader in domain security and brand protection, protecting more than 20,000 customers worldwide.

- **Trusted Solutions:** Benefit from the same service CrowdStrike relies on — CSC manages and secures crowdstrike.com and related web properties.

Use Case/Challenge	Solution	Benefits
Manage Malicious Domain Threats	CSC provides managed takedowns for domains detected through Falcon Adversary Intelligence, with full lifecycle management and portal visibility.	• Complete takedown management from submission to confirmation • Real-time tracking and status updates • Faster threat neutralization with expert registrar relationships
Streamline Threat Response Workflows	One-click submission from Falcon Adversary Intelligence directly to CSC's managed takedown service eliminates manual coordination and follow-up.	• Seamless integration with existing threat intelligence workflows • Reduced manual effort and coordination overhead • Faster mean time to threat neutralization
Ensure Takedown Success	CSC leverages global registrar relationships and brand protection and domain security expertise to maximize takedown success rates and minimize response times.	• Higher success rates through expert registrar engagement with intellectual property expertise • Clear communication on outcomes and next steps • Comprehensive reporting and work logs for compliance

Technical solution

The CSC integration enhances Falcon Adversary Intelligence by providing managed domain takedown management. When Recon detects malicious domains, phishing sites, or brand impersonations, security teams can submit these threats directly to CSC with one click. CSC then manages the entire takedown lifecycle, providing customers with dedicated portal access to track progress, receive status updates, and confirm successful neutralization.

How it works:

1. **Detect:** Falcon Adversary Intelligence Recon identifies malicious domains across the open, deep, and dark web.

2. **Submit:** One-click submission sends a domain from Falcon directly to CSC for managed takedown.

3. **Manage:** CSC handles all registrar communications, enforcement processes, and coordination.

4. **Track:** Real-time visibility is provided through the CSC portal with status updates and timeline.

5. **Confirm:** Complete work logs of takedown success and final outcomes are included.

Key capabilities

- **End-to-End Takedown Management**: Get complete lifecycle management, from initial submission through final confirmation and documentation.

- **Real-Time Portal Access**: The dedicated CSC portal provides continuous visibility into takedown status, timing, and outcomes.

- **Expert Registrar Relationships**: Leverage CSC's global registrar network coupled with domain security and brand protection expertise for maximum success rates.

- **Seamless Integration**: Submit directly from Falcon Adversary Intelligence Recon with one click.

- **Comprehensive Reporting**: Get detailed work logs and reporting for compliance, metrics, and stakeholder communication.

About CSC

CSC is a global leader in mitigating domain security, DNS, phishing and digital brand threats, protecting more than 20,000 customers worldwide as an enterprise domain registrar. CSC provides comprehensive domain security services and has proven expertise in brand protection, rapid threat response and domain takedown management.

About CrowdStrike

CrowdStrike (Nasdaq: CRWD), a global cybersecurity leader, has redefined modern security with the world's most advanced cloud-native platform for protecting critical areas of enterprise risk — endpoints and cloud workloads, identity and data.

Powered by the CrowdStrike Security Cloud and world-class AI, the CrowdStrike Falcon® platform leverages real-time indicators of attack, threat intelligence, evolving adversary tradecraft and enriched telemetry from across the enterprise to deliver hyper-accurate detections, automated protection and remediation, elite threat hunting and prioritized observability of vulnerabilities.

Purpose-built in the cloud with a single lightweight-agent architecture, the Falcon platform delivers rapid and scalable deployment, superior protection and performance, reduced complexity and immediate time-to-value.

CrowdStrike: We stop breaches.
